TECHNICAL SKILLS

Cloud & IaC: AWS (EC2, VPC, IAM, Security Groups, Elastic IP), Azure (VNet, NSG, VMs), Terraform, Ansible

Containers & CI/CD: Docker, Docker Compose, GitHub Actions, Jenkins

Monitoring: Prometheus, Grafana, Alertmanager, node_exporter

Web & Networking: Linux, Nginx, DNS, HTTP/HTTPS, TLS (Let's Encrypt, certbot), WebSockets

Languages & Data: Bash, JavaScript (Node.js, Express), SQL, C++, MongoDB, MySQL

Currently Learning: Kubernetes, ELK Stack

PROJECTS

BattleRoom | Real-time quiz platform on AWS

[Live](#) | [GitHub](#)

AWS, Terraform, Ansible, Docker, GitHub Actions, Nginx, Let's Encrypt, Prometheus, Grafana

- Provisioned the full AWS environment with Terraform (23 resources): custom VPC, public subnet, internet gateway, routing, and two EC2 servers with Elastic IPs, one for the app and one for monitoring.
- Restricted metrics ports so only the monitoring server can scrape them, using security-group references, and enforced IMDSv2 on all instances to block cloud-credential theft.
- Wrote Ansible playbooks that take a fresh server to a running app: Docker, Nginx, TLS, containers, disk resize and swap.
- Built a GitHub Actions pipeline that builds images, tags them by commit SHA, pushes to Docker Hub, deploys with Ansible, and runs a health-check smoke test on every push to main.
- Configured Nginx as a WebSocket reverse proxy with Let's Encrypt TLS, using renewal hooks that reload Nginx without dropping live connections.
- Set up Prometheus, Grafana and Alertmanager to scrape host and app metrics, with alerts for downtime, disk and memory sent to Discord.
- Built the app in Node.js, Express, Socket.IO and MongoDB, with JWT auth, rate limiting and Gemini-generated questions.

Portfolio Site | Static site on Azure, deployed by pipeline

[Live](#) | [GitHub](#)

Azure, Terraform, Docker, Ansible, Nginx, GitHub Actions, Let's Encrypt

- Provisioned Azure infrastructure with Terraform: VNet, subnet with an NSG, static public IP, network interface and an Ubuntu VM with key-only SSH and no managed identity.
- Packaged the site as an 85 MB two-stage Docker image (Node build, Nginx serve), so each commit SHA tag is one exact, rollback-ready version of the site.
- Built a GitHub Actions pipeline (type-check, build and push, Ansible deploy, HTTPS smoke test) with the server's SSH host key pinned in the repo.

EXPERIENCE

Telgoo5

Noida, India

Technical Project Coordinator (Trainee) · Telecom BSS/MVNE SaaS

March 2026 – Present

- Automated a repetitive bulk portal task across ~460 accounts by scripting the portal's own API requests with data from read-only SQL, replacing hours of manual work.
- Wrote SQL against production databases to trace billing and payment discrepancies to root cause, escalating across teams to resolution.
- Debugged REST API provisioning failures with Postman across subscriber, billing and SIM inventory modules.
- Standardized agent permission and role configs across operators against a baseline, reducing configuration drift between clients.
- Ran bulk operations across 3,500+ agents on a live platform, coordinating Dev, QA, DevOps and client teams.

EDUCATION

ABES Engineering College (AKTU)

Ghaziabad, India

B.Tech in Computer Science & Engineering · CGPA 7.62/10

2022 – 2026

C.C.A.S. Jain Sr. Sec. School

Ganaur, India

Class XII: 94.6% · Class X: 93.2%

250+ DSA problems solved (LeetCode, GeeksforGeeks, CodeChef) · HackerRank 4-star Problem Solving, SQL (Basic & Intermediate) certified
